

POLYMER ADAPTOR INSTALLATION INSTRUCTIONS

The polymer adaptor panel is used when joining polymer wall panels to steel wall panels. The polymer adaptor panel can be used right or left by flipping it end for end. Place the adaptor side that has matching holes against the steel wall panel, step side panel or bench side panel and bolt together with the 3/8-16 serrated flange head bolts and nuts. Next place the polymer panel against the adaptor side flange with matching holes. Next place the polymer brace on the inside flange of the polymer panel. Insert the pool bolt through the steel panel, the polymer panel flange and then the brace ear. Thread the pool nut onto the pool bolt. Leave loose until all pool bolts are installed and then tighten all.
